*Extender PCF para disponer de Arboles Binarios*

## Sintaxis de Tipos:

$A = \text{Nat} \mid A \Rightarrow A \mid A \wedge A \mid \text{Tree } A$

## Sintaxis de terminos:

$t = \dots \mid \text{Leaf } t \mid \text{Tree } t \ t \ t \mid \text{if Leaf } t \text{ then } t \text{ else } t \mid \text{CL } t \mid \text{CR } t \mid \text{Node } t$

## Semantica Operacional:

CL Tree  $t \ u \ v \rightarrow u$

CR Tree  $t \ u \ v \rightarrow v$

ifLeaf Tree  $t \ u \ v$  then  $u$  else  $v \rightarrow v$

ifLeaf Leaf  $t$  then  $u$  else  $v \rightarrow u$

Node Tree  $t \ u \ v \rightarrow t$

Node Leaf  $t \rightarrow t$

## Relacion definida inductivamente:

$$\frac{\Gamma \vdash t : A}{\Gamma \vdash \text{Leaf } t : A \Rightarrow \text{Leaf } A}$$
$$\frac{\Gamma \vdash u : \text{Tree } A}{\Gamma \vdash \text{CL Tree } u \ v \ t : \text{Tree } A \Rightarrow \text{Tree } A}$$
$$\frac{\Gamma \vdash v : \text{Tree } A}{\Gamma \vdash \text{CR Tree } u \ v \ t : \text{Tree } A \Rightarrow \text{Tree } A}$$
$$\frac{\Gamma \vdash t : A}{\Gamma \vdash \text{Node Tree } u \ v \ t : \text{Tree } A \Rightarrow A}$$
$$\frac{\Gamma \vdash t : A}{\Gamma \vdash \text{Node Leaf } t : \text{Leaf } A \Rightarrow A}$$
$$\frac{\Gamma \vdash u : \text{Tree } A \quad \Gamma \vdash v : \text{Tree } A \quad \Gamma \vdash t : A}{\Gamma \vdash \text{Tree } u \ v \ t : \text{Tree } A \Rightarrow \text{Tree } A \Rightarrow A \Rightarrow \text{Tree } A}$$
