

Entrega 4 - Primera Parte

Martin Alejandro Melo

13 de septiembre de 2015

Derivar tipo con Hindley y Robinson a: Node ((fun x.leaf x) (fun y.y)).

$$\frac{\frac{\frac{x : B \vdash x \rightsquigarrow B, \emptyset}{\Gamma \vdash \text{fun } x.\text{Leaf } x \rightsquigarrow B \Rightarrow \text{Tree } B, \emptyset} \quad \frac{y : A \vdash y \rightsquigarrow A, \emptyset}{\Gamma \vdash \text{fun } y.y \rightsquigarrow A \Rightarrow A, \emptyset}}{\Gamma \vdash (\text{fun } x.\text{Leaf } x)(\text{fun } y.y) \rightsquigarrow X, \{B \Rightarrow \text{Tree } B = (A \Rightarrow A) \Rightarrow X\}}}{\Gamma \vdash \text{Node } ((\text{fun } x.\text{Leaf } x)(\text{fun } y.y)) \rightsquigarrow C, \{B \Rightarrow \text{Tree } B = (A \Rightarrow A) \Rightarrow X, X = \text{Tree } C\}}$$

Robinson

$$\left\{ \begin{array}{l} B \Rightarrow \text{Tree } B = (A \Rightarrow A) \Rightarrow X \\ X = \text{Tree } C \end{array} \right.$$

$\Rightarrow (1)$

$$\left\{ \begin{array}{l} B = (A \Rightarrow A) \\ \text{Tree } B = X \\ X = \text{Tree } C \end{array} \right.$$

$\Rightarrow (1)$

$$\left\{ \begin{array}{l} B = (A \Rightarrow A) \\ \text{Tree } B = \text{Tree } B \\ \text{Tree } B = \text{Tree } C \end{array} \right.$$

$\Rightarrow (4)$

$$\left\{ \begin{array}{l} B = (A \Rightarrow A) \\ \text{Tree } B = \text{Tree } C \\ B = C \end{array} \right.$$

$\Rightarrow (1)$

$$\left\{ \begin{array}{l} (A \Rightarrow A) = (A \Rightarrow A) \\ \text{Tree } (A \Rightarrow A) = \text{Tree } C \\ (A \Rightarrow A) = C \end{array} \right.$$

$S = [(A \Rightarrow A)/C]$
El tipo es: $(A \Rightarrow A)$
